

CHEMICAL AND PHYSICAL PROCESSES IN COMBUSTION

**1996 FALL TECHNICAL MEETING
THE EASTERN STATES SECTION OF THE COMBUSTION INSTITUTE
DECEMBER 9-11, 1996
HILTON HEAD, SOUTH CAROLINA**

**EXECUTIVE COMMITTEE OF
THE EASTERN STATES SECTION
OF THE COMBUSTION INSTITUTE
1995-1997**

Chair:	Richard G. Gann National Institute of Standards and Technology
Vice-Chair:	Frederick C. Gouldin Cornell University
Secretary:	Kenneth Brezinsky University of Illinois Chicago
Treasurer:	Clarke E. Hermance University of Vermont
Papers Chair:	Mitchell D. Smooke Yale University
Program Chair:	Phillip R. Westmoreland University of Massachusetts Amherst
Arrangements Chair:	Meredith B. Colket III United Technologies Research Center
Members-at-large:	Anthony M. Dean Exxon Research & Engineering Michael A. Delichatsios Factory Mutual Research Corporation K. Kailasanath Naval Research Laboratory Lisa D. Pfefferle Yale University W. Terry Rawlins Physical Sciences, Inc. Robert J. Santoro The Pennsylvania State University Kermit C. Smyth National Institute of Standards and Technology Patricia A. Tatem Naval Research Laboratory

Monday, December 9, 1996

**Session A-1: Unsteady-state Phenomena
Chair: W. Proscia, United Technologies Research Center**

9:00	1.	Acoustic Instability of Curved Flames Propagating in Tubes,	51
		<i>L. He and C.K. Law, Princeton University</i>	
9:20	2.	The Role of Chemical Kinetics in Driving Acoustic Dis-	55
		turbances in Lean Premixed Combustors, T. Lieuwen,	
		<i>Y. Neumeier, and B.T. Zinn, Georgia Institute of Technology</i>	
9:40	3.	Darrieus-Landau Instability, Growing Cycloids and Ex-	59
		anding Flame Acceleration, W.T. Ashurst, Sandia National	
		<i>Laboratories</i>	
10:00	4.	Excitability in Near-Limit, Premixed Gas Combustion,	63
		<i>H. Pearlman, University of Southern California</i>	
10:40	5.	Effect of Chemical Mechanism on Unsteady Premixed	67
		Strained Flames, P.S. Wyckoff and H.N. Najm, Sandia National	
		<i>Laboratories</i>	
11:00	6.	Unsteady Ignition of Nonpremixed Counterflowing Hydro-	71
		gen versus Heated Air, C.J. Sung and C.K. Law, Princeton	
		<i>University</i>	
11:20	7.	Effects of Turbulence on the Ignition of Nonpremixed At-	75
		mospheric Counterflowing Hydrogen versus Heated Air,	
		<i>J.D. Blouch, C.J. Sung, C. Fotache, and C.K. Law, Princeton</i>	
		<i>University</i>	
11:40	8.	Numerical Investigation of Wall Jet Ignition by Radiation,	79
		<i>B. Ring and P. Durbetaki, Georgia Institute of Technology</i>	

Monday, December 9, 1996

Session B-1: Soot and Its Possible Precursors

Chair: J.H. Miller, The George Washington University

- | | | | |
|-------|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 9:00 | 41. | Universal Relationships in Sooting Diffusion Flames, <i>C.R. Kaplan and K. Kailasanath, Naval Research Laboratory</i> | 83 |
| 9:20 | 42. | In Defense of the Ionic Mechanism of Soot Formation, <i>H.F. Calcote, AeroChem Research Laboratories</i> | 87 |
| 9:40 | 43. | Computational and Experimental Study of a Sooting, Coflow, Laminar Diffusion Flame, <i>M.D. Smooke, C.S. McEnally, L.D. Pfefferle, Yale University, R.J. Hall and M.B. Colket, United Technologies Research Center</i> | 91 |
| 10:00 | 44. | Soot Formation in Co-Flowing Non-Premixed Methane Flames with Hydrocarbon Additives, <i>C.S. McEnally and L.D. Pfefferle, Yale University</i> | 95 |
| 10:40 | 45. | Study of Soot Formation in an Unsteady Propane/Air Counterflow Diffusion Flame, <i>M.E. DeCroix and W.L. Roberts, North Carolina State University</i> | 99 |
| 11:00 | 46. | Investigation of Soot Precursor Carbonization using LIF, LII, and Bright and Dark Field TEM, <i>R.L. Vander Wal, NASA Lewis Research Center, and K.A. Jensen, University of Illinois at Chicago</i> | 103 |
| 11:20 | 47. | Effects of Finite Time Response and Soot Deposition on Thin Filament Pyrometry Measurements in Time-Varying Diffusion Flames, <i>W.M. Pitts, D.A. Everest, and K.C. Smyth, National Institute of Standards Technology and</i> | 107 |
| 11:40 | 48. | The Effect of Post-Flame Temperature and Oxygen Supply on the Production of Polycyclic Aromatic Hydrocarbons (PAH) Emitted from Hydrocarbon Diffusion Flames, <i>M.P. Tolocka, P.B. Richardson, and J.H. Miller, The George Washington University</i> | 111 |

Monday, December 9, 1996

Session C-1: Phenomena in Practical Combustors

Chair: T.A. Litzinger, The Pennsylvania State University

- | | | | |
|-------|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 9:00 | 81. | Flame Evolution Imaging and its Application to Control of Combustion Instability in a Coaxial Dump Combustor, <i>J.G. Lee, C.-H. Jeon, and D.A. Santavicca, The Pennsylvania State University</i> | 115 |
| 9:20 | 82. | LIF and Flame-Emission Imaging of Liquid Fuel Films and Pool Fires in an SI Engine, <i>P.O. Witze and R.M. Green, Sandia National Laboratories</i> | 119 |
| 9:40 | 83. | Enhancement of the Luminosity of Methane-Air Flames, <i>A.A. Fridman, S.A. Nester, A.V. Saveliev, S.A. Zelepouga, and L.A. Kennedy, The University of Illinois at Chicago</i> | 123 |
| 10:00 | 84. | Determination of the Unsteady Combustion Process Driving in an Unstable Combustor from Acoustic Pressure Distribution Measurements, <i>T. Lieuwen, Y. Neumeier, and B.T. Zinn, Georgia Institute of Technology</i> | 127 |
| 10:40 | 85. | Effect of Transpiration Fuel Injection on Wall Drag in a Supersonic Combustor Flow Field, <i>L.A. Castiglione, University of Washington, G.B. Northam, NASA Langley, N.R. Baker, Lockheed Martin Corp., and L.A. Roe, University of Arkansas</i> | 131 |
| 11:00 | 86. | Effect of Simulated Cavity Fuel Injection on Wall Drag in a Supersonic Internal Flow, <i>L.A. Castiglione, University of Washington, G.B. Northam, NASA Langley, N.R. Baker, Lockheed Martin Corp., and L.A. Roe, University of Arkansas</i> | 135 |
| 11:20 | 87. | A Parametric Analysis on the Effect of Activation Energy on the Warm-Up of Natural Gas-Fired Catalytic Combustors, <i>C.A. Frye and A.L. Boehman, The Pennsylvania State University</i> | 139 |
| 11:40 | 88. | The Influence of Radiation Heat Transfer on Catalytic Combustor Warm-Up, <i>A.L. Boehman, The Pennsylvania State University</i> | 143 |

Monday, December 9, 1996

Session A-2: Ignition and Fires

Chair: M.A. Delichatsios, Factory Mutual Research Corporation

- | | | | |
|------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 9. | Nd:YAG Laser Ignition of Jet A Vapor/Air Mixtures, Y.-C. Li, D. Zhou, and M. Lavid, <i>Energia, Inc.</i> | 147 |
| 2:50 | 10. | Radiatively Induced Ignition of PMMA in the Presence of Forced Convection, J.R. Koski, D.B. Coffin, and P. Durbetaki, <i>Georgia Institute of Technology</i> | 151 |
| 3:10 | 11. | Ignition Behavior of Pulverized Coals, J.C. Chen, S. Musti, and V. Kabadi, <i>North Carolina A&T State University</i> | 155 |
| 3:50 | 12. | Smoke Visualization of the Gas-Phase Flow During Flame Spread over a Liquid Pool in the Pulsating Spread Regime, F.J. Miller, A. Mielke, J. Roncace, and H.D. Ross, <i>NASA Lewis Research Center</i> | 159 |
| 4:10 | 13. | Composite Material and Laminate Response to Heat Flux: Flame Spread Research and the GM Car Fire Program, I.S. Wichman and A.B. Oladipo, <i>Michigan State University</i> | 163 |
| 4:30 | 14. | Flame Spread Processes Across Liquid Pools With a Low-Speed Opposed or Concurrent Air Flow, H.D. Ross and F.J. Miller, <i>NASA Lewis Research Center</i> | 167 |
| 4:50 | 15. | A Novel Device for Studying Flame Spread Over Thin Solid Fuel, P.V. Ferkul, <i>Analex Corporation</i> , J.S. T'ien, R.D. Pettegrew, <i>Case Western Reserve University</i> , K.R. Sacksteder, <i>NASA Lewis Research Center</i> | 171 |
| 5:10 | 16. | A Model for Estimating Combustion Product Composition in Compartment Fires, B.Y. Lattimer and B. Ganeshan, <i>Virginia Polytechnic Institute and State University</i> | 175 |
| 5:30 | 17. | A Radiative Transport Model for Large Eddy Fire Simulations, H.R. Baum and W.E. Mell, <i>National Institute of Standards and Technology</i> | 179 |

Monday, December 9, 1996

Session B-2: Measurement Methods

Chair: M.B. Long, Yale University

- | | | | |
|------|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 49. | A Flow Reactor Study of 1-Methyl-Naphthalene Pyrolysis Using a New Condensed Species Sampling Probe, C.J. Mikolajczak, M.J. Wornat, F.L. Dryer, O.B. Fringer, and T.J. Held, <i>Princeton University</i> | 183 |
| 2:50 | 50. | Laser-Induced Incandescence: Excitation Intensity, R.L. Vander Wal, <i>NASA Lewis Research Center</i> , and K.A. Jensen, <i>University of Illinois at Chicago</i> | 187 |
| 3:10 | 51. | Quantitative Detection and Imaging of Soot Particles by Laser Induced Incandescence, K.R. McManus, M.G. Allen, and W.T. Rawlins, <i>Physical Sciences Inc.</i> | 191 |
| 3:50 | 52. | Soot Diagnostics Based on Thermophoretic Particle Deposition, U.O. Koylu, <i>Florida International University</i> , C.S. McEnally, D.E. Rosner, and L.D. Pfefferle, <i>Yale University</i> | 195 |
| 4:10 | 53. | Quantitative Interpretation of Laser Scattering/Extinction Measurements in Soot-Laden Flames, U.O. Koylu, <i>Florida International University</i> | 199 |
| 4:30 | 54. | Measurement of CO Isotopic Ratios in Combustion Using Tunable Diode Laser Absorption Spectroscopy, D.A. Hill, M.P. Tolocka, and J.H. Miller, <i>The George Washington University</i> | 203 |
| 4:50 | 55. | Investigations of the Signal Intensity and Background Noise in Tilted Backward Pump Degenerate Four-Wave Mixing, S.J. Tsay, K.G. Owens, K.W. Aniolek, D.L. Miller, and N.P. Cernansky, <i>Drexel University</i> | 207 |
| 5:10 | 56. | One and Two Point Temperature Measurements with Compensated Thermocouples, D. Rog and F.C. Gouldin, <i>Cornell University</i> | 211 |
| 5:30 | 57. | Acetone LIF Flow Visualization Diagnostics for Use in Supersonic Reacting Flows, R.A. Bryant, J.M. Donbar, and J.F. Driscoll, <i>University of Michigan</i> | 215 |

Monday, December 9, 1996

Session C-2: NO_x

Chair: W. Tsang, National Institute of Standards and Technology

- | | | | |
|------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 89. | Water Injection Effects on NO_x Emissions for Engines Utilizing Nonpremixed Combustion, <i>M.A. Psota and A.M. Mellor, Vanderbilt University</i> | 219 |
| 2:50 | 90. | Effect of Aromatics and Additives on Combustion and Emissions in an Optically-accessible DI Diesel Engine, <i>D.P. Skrzycke, T.A. Litzinger, The Pennsylvania State University, D.T. Daly and R.E. Kornbrekke, Lubrizol Corporation</i> | 223 |
| 3:10 | 91. | Experimental Investigations of the Plasma De NO_x Process for NO_x Control, <i>K. Chess, S.C. Yao, Carnegie Mellon University, and A. Russell, Georgia Institute of Technology</i> | 227 |
| 3:50 | 92. | A Study of CN Formation Dependence on Equivalence Ratio and Temperature in Fuel-Rich Propane/Air Flames Doped with NO Using Degenerate Four-Wave Mixing, <i>S.J. Tsay, K.G. Owens, K.W. Aniolek, D.L. Miller, and N.P. Cernansky, Drexel University</i> | 231 |
| 4:10 | 93. | Effects of Air-Side Versus Fuel-Side Diluent Addition on NO_x Emissions from Laminar Diffusion Flames, <i>J.J. Feese and S.R. Turns, The Pennsylvania State University</i> | 235 |
| 4:30 | 94. | Reduction Strategy for Nitric Oxide Formation Chemistry in a Laminar Methane/Air Diffusion Flamelet, <i>M.A.T. Marro, M.A. Pivovarov, and J.H. Miller, The George Washington University</i> | 239 |
| 4:50 | 95. | Laser-Initiated NO_x Reduction by NH_3 : Determination of Total Rate Constants and Product Branching Ratios for the $NH_2 + NO_x$ Reaction, <i>J. Park and M.C. Lin, Emory University</i> | 243 |
| 5:10 | 96. | $NH_2 + NH_2$ Recombination and Reactions of 1H_2NN , <i>J.W. Bozzelli and A.M. Dean, Exxon Research and Engineering Company</i> | 247 |
| 5:30 | 97. | Theoretical Study of the $NH_2 + C_2H_2$ Reaction, <i>L.V. Moskaleva and M.C. Lin, Emory University</i> | 251 |

Tuesday, December 10, 1996

Session A-3: Fire Extinction and Inhibition

Chair: W.L. Grosshandler, National Institute of Standards and Technology

- | | | | |
|-------|-----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 9:00 | 18. | Refrigerant Flammability: A New Application of the Opposed-flow Burner, <i>C. Womeldorf, W. Grosshandler, and M. King, National Institute of Standards and Technology</i> | 257 |
| 9:20 | 19. | The Effect of Fluorinated Propanes on the Extinction of Methane-Air Counterflow Diffusion Flames, <i>B.A. Williams, P. Papas, J.W. Fleming, and R.S. Sheinson, Naval Research Laboratory</i> | 261 |
| 9:40 | 20. | Chemical Limits to Flame Inhibition, <i>V. Babushok, W. Tsang, G.T. Linteris, and D. Reinelt, National Institute of Standards and Technology</i> | 265 |
| 10:00 | 21. | Optical Diagnostics of Fluorinated Intermediates in Low Pressure Flames Suppressed by Hydrofluorocarbons, <i>D. L'Espérance, B.A. Williams, and J.W. Fleming, Naval Research Laboratory</i> | 269 |
| 10:40 | 22. | Numerical Study of the Inhibition of Premixed and Diffusion Flames by Iron Pentacarbonyl, <i>D. Reinelt, G.T. Linteris, and V. Babushok, National Institute of Standards and Technology</i> | 273 |
| 11:00 | 23. | Water Mist Suppression of Methane-Air Diffusion Flames, <i>K. Prasad, C. Li, K. Kailasanath, C. Ndubizu, R. Ananth, and P.A. Tatem, Naval Research Laboratory</i> | 277 |
| 11:20 | 24. | The Dynamics of Water Droplets in a Counterflow Field and Its Effect on Flame Extinction, <i>A.M. Lentati and H.K. Chelliah, University of Virginia</i> | 281 |
| 11:40 | 25. | Critical Conditions for Extinction and Transient Pyrolysis Decay in Solid Material Fires, <i>M.A. Delichatsios, Factory Mutual Research Corporation, and D.G. Vlachos, University of Massachusetts Amherst</i> | 285 |

Tuesday, December 10, 1996

Session B-3: Combustion Modeling I

Chair: K. Kailasanath, Naval Research Laboratory

- 9:00 58. Simulation of Coal Gasification in a Fluidized Bed, *M. Syamlal, EG&G Washington Analytical Services Center, Inc., and T.J. O'Brien, Morgantown Energy Technology Center* 289
- 9:20 59. Optimized Air Staged Injection for the Oxidation of Low Calorific Value Gases, *R.S. Gemmen, Morgantown Energy Technology Center* 293
- 9:40 60. Modeling Combustion and Fly Ash Production in a Pulverized Coal-Fired Furnace, *K.A. Chandratre, B. Farouk, Drexel University, and W. Fuchs, Pittsburgh Energy Technology Center* 297
- 10:00 61. Application of Continuation Methods to Soot Formation in Counterflow Diffusion Flames, *M.D. Smooke, Yale University, R.J. Hall and M.B. Colket, United Technologies Research Center* 301
- 10:40 62. Application of a Non-optically Thin Radiation Model to the Study of Low-strain Laminar Counterflow Flames, *C. Garcia, Ecole Centrale Paris, M.A. Tanoff, M.D. Smooke, Yale University, and R.J. Hall, United Technologies Research Center* 305
- 11:00 63. An Asymptotic and Numerical Study of a General Correlation for the Markstein Length, *C.J. Sun, L. He, and C.K. Law, Princeton University* 309
- 11:20 64. Numerical Simulation of Accelerating Premixed Flames in Closed Tubes, *U. Bielert, University of Michigan* 313
- 11:40 65. A Numerical Investigation of Asymmetric and Symmetric Fuel Injection in Whirl Flames, *H.C. Gabler, R.A. Yetter, and I. Glassman, Princeton University* 317

Tuesday, December 10, 1996

Session C-3: Chemical Kinetics: Inferring Mechanisms

Chair: E.R. Ritter, Villanova University

- 9:00 98. A New Technique for Detailed Mechanism Reduction, *R.H. Aglave, M.V. Kantak, University of Tulsa, and R.P. Hesketh, Rowan College* 321
- 9:20 99. Non-Arrhenius Reaction Rates in Pyrolysis, *A.E.S. Green, J.P. Mullin, and R.T. Pearce, University of Florida* 325
- 9:40 100. Diffusion Coefficient of Hydrogen Atom for Combustion Modeling, *H. Wang and C.K. Law, Princeton University* 329
- 10:00 101. Modeling of Chromium Combustion in Incineration, *O.E. Kashireninov and A. Fontijn, Rensselaer Polytechnic Institute* 333
- 10:40 102. The Oxidation of Toluene-n-Butane Blends, *S. Klotz, K. Brezinsky, and I. Glassman, Princeton University* 337
- 11:00 103. The Lean Oxidation of Iso-octane at Elevated Pressures, *J.-S. Chen and T.A. Litzinger, The Pennsylvania State University* 341
- 11:20 104. Initial Measurements from Reacting Flows of Hydrocarbons with Chlorine, *G.E. Oulundsen and P.R. Westmoreland, University of Massachusetts Amherst* 345
- 11:40 105. Identification of Phosphorus-Containing Species in Samples from a Premixed $CH_4/O_2/N_2$ Flame Doped with Dimethyl Methylphosphonate, *D.C. Rapp, M.F.M. Nogueira, E.M. Fisher, and F.C. Gouldin, Cornell University* 349

Tuesday, December 10, 1996

Session A-4: Droplets, Sprays, and Emulsions

Chair: A. Gomez, Yale University

- | | | | |
|------|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 26. | Radiative Effects in Space-Based Methanol/Water Droplet Combustion Experiments, <i>A.J. Marchese, Rowan College, and F.L. Dryer, Princeton University</i> | 353 |
| 2:50 | 27. | Droplet Combustion in a Low Reynolds Number Flow Environment, <i>J.C. Lee, A.G. Tomboulides, A.J. Marchese, R.A. Yetter, F.L. Dryer, and S.A. Orszag, Princeton University</i> | 357 |
| 3:10 | 28. | Turbulence Effects on the Vaporization of Single Droplets, <i>M. Birouk, B. Mesli, C. Chauveau, and I. Gökalp, CNRS-LCSR Orleans, France</i> | 361 |
| 3:50 | 29. | Effect of Fuel Velocity Modulation on Atomization and Combustion, <i>C.A. Cook, S.R. Charagundla, C. Presser, National Institute of Standards and Technology, J.L. Dressler, Fluid Jet Associates, and A.K. Gupta, University of Maryland</i> | 365 |
| 4:10 | 30. | Similitude Features of Swirl Coaxial Rocket Injector Sprays, <i>S.A. Rahman, S. Pal, and R.J. Santoro, The Pennsylvania State University</i> | 369 |
| 4:30 | 31. | Hydrodynamic Instability of Liquid-Propellant Combustion at Normal and Reduced Gravity, <i>S.B. Margolis, Sandia National Laboratories</i> | 373 |
| 4:50 | 32. | A Method for Assessing the Optimal Quality of Water-Heavy Fuel Oil Emulsions by Using Combustion Graphology, <i>V.V. Ghia and A. Colibaba-Evulet, Institute for Thermal Engines, Bucharest, Romania</i> | 377 |

Tuesday, December 10, 1996

Session B-4: Combustion Modeling II

Chair: W.L. Roberts, North Carolina State University

- | | | | |
|------|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 66. | Simulation of Local Quenching in a Methane-Air Jet Diffusion Flame, <i>V.R. Katta, K.Y. Hsu, Innovative Scientific Solutions, Inc., and W.M. Roquemore, Wright-Patterson Air Force Base</i> | 381 |
| 2:50 | 67. | A Further Analysis of the Stabilizing Region of Methane Jet Diffusion Flames, <i>F. Takahashi, University of Dayton Research Institute, and V.R. Katta, Innovative Scientific Solutions, Inc.</i> | 385 |
| 3:10 | 68. | Diffusion Flame Attachment Near Cold, Chemically Inert Surfaces: Theory and Experiment, <i>I.S. Wichman, Michigan State University</i> | 389 |
| 3:50 | 69. | Numerical Simulation of Axisymmetric, Bluff-Body Stabilized Flames Using Eddy Viscosity - Transport Turbulence Models, <i>C.J. Roy, J.R. Edwards, and D.S. McRae, North Carolina State University</i> | 393 |
| 4:10 | 70. | Analytical and Numerical Studies of the Heat-Loss Zone in a Diffusion Flame Produced by Soot, <i>I.S. Wichman and A. Ray, Michigan State University</i> | 397 |
| 4:30 | 71. | Comparison of Different Radiation Treatments for One-Dimensional Diffusion Flame, <i>H. Bedir, J.S. T'ien, Case Western Reserve University, and H.S. Lee, NASA Lewis Research Center</i> | 401 |
| 4:50 | 72. | The Effects of Radiation on Stretched Flames, <i>J. Buckmaster, University of Illinois at Urbana-Champaign</i> | 405 |

Tuesday, December 10, 1996

Session C-4: Chemical Kinetics: Models vs. Data

Chair: E.M. Fisher, Cornell University

- | | | | |
|------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 2:30 | 106. | Measured and Predicted Properties of Wet-Carbon-Monoxide/Air Flames, <i>M.I. Hassan, K.T. Aung, and G.M. Faeth, The University of Michigan</i> | 409 |
| 2:50 | 107. | Explosion Limit Behavior of Dilute Hydrogen-Oxygen Mixtures from 0.3 to 3.0 atm and 850 to 950 K, <i>M.A. Mueller, R.A. Yetter, and F.L. Dryer, Princeton University</i> | 413 |
| 3:10 | 108. | The Influence of Vinyl Oxidation on the Calculated Structure of Premixed $CH_4/O_2/Ar$ Flames, <i>M. Balthasar and F. Mauss, Lund Institute of Technology, Lund, Sweden</i> | 417 |
| 3:50 | 109. | MBMS Analysis of a Fuel-Lean Ethylene Flame, <i>A. Bhargava and P.R. Westmoreland, University of Massachusetts Amherst</i> | 421 |
| 4:10 | 110. | Comparison of Measured and Computed Concentration of Excited State CH in an Axisymmetric Laminar Diffusion Flame, <i>K.T. Walsh, M.B. Long, M.A. Tanoff, and M.D. Smooke, Yale University</i> | 425 |
| 4:30 | 111. | Structure and State Relationships of Laminar Soot-Free Hydrocarbon-Fueled Diffusion Flames, <i>K.-C. Lin and G.M. Faeth, The University of Michigan</i> | 429 |
| 4:50 | 112. | A Spark Ignited Engine and Flow Reactor Study of the Effect of an Organic Fuel Additive on Hydrocarbon Emissions, <i>D.L. Eccles, T.A. Litzinger, J.-S. Chen, The Pennsylvania State University, and B. Studzinski, Texaco, Inc.</i> | 433 |
| 5:10 | 113. | Laminar Flame Speeds and Oxidation Kinetics of Dichloromethane and Trichloromethane, <i>J.C. Leylegian, H. Wang, D.L. Zhu, and C.K. Law, Princeton University</i> | 437 |

Wednesday, December 11, 1996

Session A-5: Turbulence Phenomena

Chair: R.J. Santoro, The Pennsylvania State University

- | | | | |
|-------|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 9:00 | 33. | OPEN | |
| 9:20 | 34. | Behavior of Periodically Forced Buoyant Plumes of Helium, <i>B.M. Cetegen and J. McTeague, University of Connecticut</i> | 443 |
| 9:40 | 35. | Unsteady Diffusion Flames in Microgravity, <i>U. Hegde, NYMA, Inc., D.P. Stocker, NASA Lewis Research Center, and M.Y. Bahadori, Science Applications International Corporation</i> | 447 |
| 10:00 | 36. | Measurements of Flame Flicker Under Different Gravitational Levels, <i>M.Y. Bahadori, L. Zhou, Science Applications International Corporation, D.P. Stocker, NASA Lewis Research Center, and U. Hegde, NYMA Inc.</i> | 451 |
| 10:40 | 37. | Interaction of Normal Shock Waves with Non-uniform Density Turbulent Axisymmetric Jets, <i>J.C. Hermanson, Worcester Polytechnic Institute, B. Berger and B.M. Cetegen, University of Connecticut</i> | 455 |
| 11:00 | 38. | PDF Calculations of Non-premixed CH_4 Flames with Detailed Kinetics, <i>V. Saxena and S.B. Pope, Cornell University</i> | 459 |
| 11:20 | 39. | PIV Images of Vortices Passing Through Flames and the Resulting Attenuation and Generation of Vorticity, <i>C.J. Mueller, J.F. Driscoll, University of Michigan, D.L. Reuss and M.C. Drake, General Motors Research and Development</i> | 463 |
| 11:40 | 40. | The Influence of Unsteady Stretch on Premixed Flame Kernel Growth, <i>D.A. Eichenberger and W.L. Roberts, North Carolina State University</i> | 467 |

Wednesday, December 11, 1996

Session B-5: Heterogeneous Processing

Chair: M.R. Zachariah, National Institute of Standards and Technology

- 9:00 73. Characterization of a Continuous Self-Sustaining Flame Process for Producing Silica Particles, *S.A. Danczyk and M.S. Wooldridge, Texas A&M University* 471
- 9:20 74. Evaluation of Sintering Characteristic Time from In-Situ Light Scattering Measurements: Nanosized Titania Processed in a Flame Reactor, *G. Yang and P. Biswas, University of Cincinnati* 475
- 9:40 75. Capture of Mercury in Combustion Environments by In-Situ Generated Titania Particles with UV Radiation, *C.-Y. Wu, E. Arar, P. Biswas, University of Cincinnati, and G. Tyree, Morehead State University* 479
- 10:00 76. Studies on the Burning of Levitated Aluminum Particles: Effects of Variable CO_2 Concentration under Pressure, *M. Marion, F. Gonthier, C. Chauveau, and I. Gökalp, CNRS-LCSR Orleans, France* 483
- 10:40 77. Study of Laser Assisted Combustion of Nitramine Propellants, *G. Kudva, C.-J. Tang, Y.J. Lee, and T.A. Litzinger, The Pennsylvania State University* 487
- 11:00 78. A Study of the Combustion Response of the HMX Monopropellant to Sinusoidal Laser Heating, *C.-J. Tang, G. Kudva, Y.J. Lee, and T.A. Litzinger, The Pennsylvania State University* 491
- 11:20 79. Ignition and Combustion of Boron Particles in Fluorine Containing System, *W. Zhou, R.A. Yetter, F.L. Dryer, H. Rabitz, Princeton University, R.C. Brown and C.E. Kolb, Aerodyne Research, Inc.* 495
- 11:40 80. Thermal Decomposition of BAMO, *Y.J. Lee, C.-J. Tang, G. Kudva, and T.A. Litzinger, The Pennsylvania State University* 499

Wednesday, December 11, 1996

Session C-5: Chemical Kinetics: Elementary Reactions

Chair: A.M. Dean, Exxon Research and Engineering Company

- 9:00 114. Wide-Temperature Range Studies of BO and BO_2 Reactions, *D.P. Belyung, G.T. Dalakos, Q. Zhang, J.R. Rocha, and A. Fontijn, Rensselaer Polytechnic Institute* 503
- 9:20 115. Experimental Flow Tube Study on Pyrolysis of 2-Chloro-1,1,1-Trifluoroethane, *R.P. Salmon and E.R. Ritter, Villanova University* 507
- 9:40 116. Pyrolysis of Triethyl Phosphate and Diisopropyl Methylphosphonate, *E.J.P. Zegers and E.M. Fisher, Cornell University* 511
- 10:00 117. Pathways for the Decomposition of 1-Hexyl Radicals, *W. Tsang, J.A. Walker, and J.A. Manion, National Institute of Standards and Technology* 515
- 10:40 118. Thermochemical Kinetic Analysis on the Reaction of Allylic Isobutenyl Radical with O_2 : An Elementary Reaction Mechanism for Isobutene Oxidation, *C.-J. Chen and J.W. Bozzelli, New Jersey Institute of Technology* 519
- 11:00 119. Ethylene+OH, Dimethyl-ether Radical+ O_2 , and the Respective Adduct Radical+ O_2 Reactions, *T. Yamada, J.W. Bozzelli, and T. Lay, New Jersey Institute of Technology* 523
- 11:20 120. A Single-Pulse Shock Tube Study of Hydrogen Atom Attack on Biphenyl, *J.A. Manion and W. Tsang, National Institute of Standards and Technology* 527
- 11:40 121. Absolute Rate Constant for the Recombination of Phenyl Radicals, *J. Park and M.C. Lin, Emory University* 531
